Key Insights

1. Sales volume

- The business made **$817,860** from **21,350 orders** and **49,574 pizzas**.
- An average order is worth **$38.31** and has **2.32 pizzas**.

2. Busiest days

- **Friday is the busiest day** (3,538 orders). Sunday is the slowest (2,624), so Friday has about 35% more orders.
- Weekends are not the peak. Saturday and Sunday together make only 27% of orders.

3. Busiest hours

- There are two clear rushes: **12 pm to 2 pm** (4,975 orders, 23%) and **4 pm to 8 pm** (8,664 orders, 41%).
- Together they bring about **64% of all orders**. The evening rush is the biggest.
- Orders drop sharply before 11 am and after 9 pm.

4. Category

- **Classic** is the leader in both pizzas sold (14,888) and share of sales (26.91%).
- Chicken sells the fewest pizzas (11,050), but its share of sales (23.96%) is higher than Veggie's (23.68%). This means Chicken pizzas have a higher price per pizza.

5. Size

- **Large** gives the biggest share of sales (45.89%). Large and Medium together give about **76%**.
- XL and XXL together give less than **2%**.

6. Best and worst sellers

- The top 5 are very close. Classic Deluxe is first with 2,453 pizzas, and the 5th pizza has 2,371, a gap of only about 3%.
- **Brie Carre is the weakest** with only 490 pizzas, about half of the next lowest (934).

Business Recommendations

1. **Staff more people on Fridays and in the two rush windows.** Fast service in these hours protects the most orders.
2. **Run offers on Sundays and Mondays**, such as combo deals or discounts. These are the slowest days, so they have the most room to grow.
3. **Offer deals in the quiet hours** (2 pm to 4 pm and after 9 pm), when orders fall. This moves some demand into slow periods.
4. **Focus on Large and Medium sizes** in stock and promotions. Consider simplifying or removing XL and XXL, since they barely sell.
5. **Increase pizzas per order** (now 2.32) with “buy 2, get a discount” or family combos. A small rise here lifts revenue without needing new customers.
6. **Review Brie Carre before deciding.** First check two things: its revenue, and whether it was on the menu for the whole year. If it is a true low performer, reprice it, bundle it or remove it.

Limitation

The data covers one year (2015), so these patterns show one year only. Also, the best and worst seller charts use quantity, not revenue.
